THANK YOU AND CONGRATULATIONS!

on your purchase of a new EARTHQUAKE® TRAIL WARRIOR LOG SPLITTER from Ardisam, Inc. We have worked to ensure that your Earthquake Trail Warrior Log Splitter will be one of the most trouble-free and satisfying pieces of equipment you have ever owned. With proper care, your log splitter will provide many years of service. Please take the time to read this manual carefully to learn how to correctly operate and maintain your equipment.

INTRODUCTION

OWNER’S RESPONSIBILITY

Accurate assembly and safe and effective use of the log splitter is the owner’s responsibility.

- Read and follow all safety instructions.
- Carefully follow all assembly instructions.
- Maintain the log splitter according to directions and schedule included in this Earthquake operator’s manual.
- Ensure that anyone who uses the log splitter is familiar with all controls and safety precautions.

* Briggs & Stratton Engine Model: 121212, Engine Type: 0133-B8
GENERAL SAFETY INSTRUCTIONS

SAFETY INSTRUCTIONS:
• Before operating this log splitter, carefully read this manual and follow all instructions.
• Do not allow anyone to operate your log splitter who has not read this manual.
• Never operate your log splitter for any other purpose than splitting wood.
• Do not operate the log splitter under the influence of alcohol, drugs or medication.
• Never allow children to operate the log splitter. Keep small children away from the work area.
• If a second person is assisting in loading logs, never activate the log splitter until the helper is clear of the work area.

PREPARATION:
• Dress appropriately when operating the log splitter. Always wear safety footwear. Never wear sandals, sneakers, or open shoes, and never operate the log splitter with bare feet. Do not wear loose clothing or jewelry that might get caught in moving parts.
• Always wear safety glasses while operating your log splitter. Wear proper head gear to keep hair away from moving parts.
• Always wear a protective hearing device.
• If you wear gloves, be sure they are tight fitting without loose cuffs or draw strings.
• Both ends of each log should be cut as square as possible to help prevent the log from sliding out of the splitter during operation.
• Handle fuel with care; it is highly flammable.
  a. Use an approved fuel container.
  b. Never add fuel to a running engine or hot engine.
  c. Fill fuel tank outdoors with extreme care. Never fill fuel tank indoors.
  d. Replace gasoline cap securely and clean up spilled fuel before restarting.
• Never attempt to make any adjustments to the log splitter while the engine is running.

OPERATION:
• Never operate the log splitter without guards in place.
• Only operate the log splitter from the operator zone.
• Know how to stop the unit and disengage the controls.
• Never place hands and/or feet between log and splitting wedge or between log and ram during forward or reverse stroke.
• Do not step over or straddle the log splitter when the engine is running. Never reach or bend over the log splitter to pick up a log.
• Never try to split more than one log at the same time.
• Never allow one person to operate the valve while another is positioning the log.
• Never attempt to load your log splitter when the cylinder wedge is in motion.
• Only use your hand to operate the control lever. Never use your foot or a rope or any other extension device.
• Always keep fingers away from any cracks that open in the log during splitting operation.
• Never move the log splitter while the engine is running.
• Never leave your log splitter unattended with the engine running. Shut off the engine if you are leaving your splitter—even for a short period of time.
• Do not run the engine in an enclosed area. Exhaust gases contain carbon monoxide. This odorless gas can be deadly when inhaled.
• Do not operate your log splitter on slippery, wet, muddy, or icy surfaces.
• Only operate your log splitter on level ground and not on a hillside.
• Never attempt to move the log splitter over hilly or uneven terrain without a tow vehicle or adequate help.
• Always block wheels to prevent movement of log splitter while in operation.
• Keep work area clear of tools, logs and any other debris.
• Always use your log splitter in daylight.
REPAIR AND MAINTENANCE SAFETY:

- Do not operate your log splitter in poor mechanical condition or when in need of repair.
- Periodically check that all nuts, bolts, and screws are tightened.
- Always perform recommended maintenance procedures before using your log splitter.
- Do not alter your log splitter in any manner such as attaching a rope or extension to the control lever or adding to the width or height of the wedge.
- Replace all damaged or worn parts immediately.
- Never tamper with the engine in order to operate at excessive speeds. The maximum engine speed is preset by the manufacturer.
- Do not service or repair your log splitter without disconnecting the spark plug wire from the spark plug.
- All replacement parts must meet manufacturer’s specifications.

FIRE PREVENTION:

- Never operate your log splitter near a flame or spark. Hydraulic oil and gasoline are flammable and can explode.
- Do not fill the gas tank while the engine is hot or running. Allow the engine to cool before refueling.
- Never smoke while operating or refueling your log splitter. Gas fumes can easily explode.
- Only refuel your log splitter outdoors in a clear area. Always use an approved fuel container. Always replace the gas cap securely.
- If gas is spilled, move machine away from the area of the spill and avoid creating any source of ignition until the spilled gas has evaporated or been cleaned up.
- Keep a Class B fire extinguisher nearby when operating your log splitter in dry areas as a precautionary measure against possible flying sparks.
- Completely drain the fuel tank prior to storage. Do not siphon by mouth.
- Always store gasoline in an approved, tightly sealed container. Store the container in a cool, dry place. Do not store indoors or near a heating appliance.

HYDRAULIC SAFETY:

- The hydraulic system and mechanical parts of your log splitter require careful inspection. Be sure to replace any damaged hydraulic component.
- Fluid escaping from a very small hole can be very difficult to see. Do not check for leaks with your hand. Escaping fluid under pressure can have sufficient force to penetrate skin, causing serious personal injury or even death. Leaks can be located by passing a piece of cardboard or wood over the suspected leak. Look for discoloration.
- If injured by escaping fluid, see a doctor at once. Serious infection or reaction can develop if proper medical treatment is not administered immediately.
- Should it become necessary to loosen or remove any hydraulic fitting or line, be sure to relieve all pressure by shutting off the engine and moving the control handle back and forth several times.
- The pressure relief valve on your log splitter is preset at the factory. Do not adjust the valve. Only a qualified service technician should perform this adjustment.
SAFETY DECALS

QUICK-SPLIT 12 OPERATING INSTRUCTIONS

1. Read Owner/Operator manual for complete instructions.
2. Start engine using instructions from engine manual.
   Advance throttle control to maximum speed.

<table>

**WARNING**

- Keep hands and all body parts away from splitting wedge, base plate, partially split wood, and moving parts.
- Hold log by the sides, not the ends.
- Only one person is permitted to stabilize log and operate the controls.
- Do not check for all leaks with your hand.
- Wear safety glasses, tight fitting work gloves, and safety shoes.

**CAUTION**

- Read Owner/Operator manual completely.
- Operate log splitter on flat, dry ground.
- NO ONE under age 18 is allowed to operate log splitter.
- Keep bystanders, children, and helpers at least 25 ft. away.
- Never operate log splitter under the influence of alcohol or drugs.

NOTICE

Off-Road Towing Use Only
Do Not Exceed 15 MPH

SET-UP & OPERATING INSTRUCTIONS

Tools needed - one 16mm combination wrench, one 17mm combination wrench, two 13mm wrenches, one flat screwdriver, one pair of pliers, one 10" adjustable wrench, one snap ring tool, one pipe wrench and one rubber mallet.

NOTE: Each log splitter was partially assembled at the factory. Refer to the parts diagram for detailed assembly.

1. Remove locking pin from outer telescopic tongue axle assembly. Lock front upright in the up position with locking pin already installed in upright. SEE FIGURE 1.

2. Slide inner hitch assy. into outer telescopic tongue/axle assy. Replace locking pin in 3rd hole. SEE FIGURE 2.

SET-UP & OPERATING

WARNING

READ AND UNDERSTAND ALL ASSEMBLY, SAFETY, & MAINTENANCE INSTRUCTIONS PROVIDED BEFORE EACH USE.

BECOME FAMILIAR WITH YOUR LOG SPLITTER FOR YOUR OWN SAFETY. FAILURE TO DO SO MAY CAUSE SERIOUS INJURY AND/OR DEATH.

DO NOT ALLOW ANYONE TO OPERATE YOUR LOG SPLITTER WHO HAS NOT READ THIS MANUAL. READ EACH STEP COMPLETELY BEFORE PROCEEDING.

ALWAYS WEAR SAFETY GLASSES DURING OPERATION.
ALWAYS WEAR STEEL TOE BOOTS DURING ASSEMBLY.
DO NOT START OR RUN THE ENGINE WITHOUT OIL IN THE HYDRAULIC RESERVOIR AND ENGINE.
INSTRUCTIONS (CONT.)

3. Mount axle assy. to telescopic tongue. Assemble using (4) bolts - 76mm in length and locknuts. Tighten with 16mm and 17mm wrenches. SEE FIGURE 3.

NOTE: Make sure bolt is installed through spacer on outside bolt. There is only one spacer per unit. SEE FIGURE 4.

FIGURE 3

FIGURE 4
SET-UP & OPERATING INSTRUCTIONS (CONT.)

4. Mount ram/beam assembly onto uprights using 82mm bolts. Tighten, but do not over tighten the lock nut as the ram/beam assy will use the bolt as a hinge.

   Note: Holes in rear upright are elongated to assist in lining up the upright holes during assembly. Tighten these fasteners securely. SEE FIGURE 5.

5. Place wheel onto axle, valve stem out. Place washer onto axle and secure with snap ring. Repeat for the other axle. SEE FIGURE 6.

6. Attach engine assembly with (1) each of 70mm bolt and 25mm bolt to axle assembly. Tighten locknuts using 13mm wrenches.

FIGURE 5

FIGURE 6
SET-UP & OPERATING INSTRUCTIONS (CONT.)

7. Slide ram assy. to rear bracket and attach with (4) 25mm bolts, lock-nuts and retainers. SEE FIGURE 7.

8. Install hydraulic valve control lever. Secure with pin and cotter key. SEE FIGURE 8.

*Notice the approximate 12 o'clock position of hydraulic fitting. SEE FIGURE 10.*

*TIP: Jiggle the fitting while tightening to ensure proper seating of the fitting.*

10. Install hydraulic return line on pump and tank assy. Slide hose onto hose barb until snug and tighten with hose clamp. SEE FIGURES 10 AND 11.

**FIGURE 10**

**FIGURE 11**
ALTERNATE ASSEMBLY

Your log splitter can be assembled without the telescopic tongue assembly for even greater portability depending on your specific needs. Follow the alternate instructions to assemble your splitter in this manner.

1. Remove fasteners holding engine from base plate and remove engine. Set aside fasteners for later use.
2. Mount engine base plate to ram/beam assy using grade 5 (or greater) fasteners (not included in hardware package).
   Notice the positioning of the base plate and hole configuration. SEE FIGURES 1 & 2.
3. Remount engine to predrilled holes in base plate using the fastners that were previously removed. SEE FIGURE 3.

![Beam mounting holes](image1)

![FIGURE 1](image2)

CAUTION

ALWAYS WEAR SAFETY GLASSES DURING OPERATION.
DO NOT START OR RUN THE ENGINE WITHOUT OIL IN THE HYDRAULIC RESERVOIR AND ENGINE.

5. Install high pressure hydraulic hose to pump/engine assy and hydraulic valve assembly Swivel end of hose goes on pump. SEE FIGURE 5.
   TIP: Jiggle the fitting while tightening to ensure that the fitting seats properly.
HYDRAULIC FILLING INSTRUCTIONS:

1. Open the air bleeder valve by turning counter clockwise approximately four turns. Failure to open vent will cause “air locking”, making filling of the hydraulic tank reservoir difficult. SEE FIGURE 1.

2. Remove filler cap. SEE FIGURE 1.

3. Using a funnel in the fill spout pour 3 quarts of SAE10 hydraulic oil. If hydraulic oil is difficult to obtain, automatic transmission fluid can be substituted. **DO NOT** mix hydraulic oil and transmission fluid.

4. Start Engine (see instructions in manual).

---

**WARNING**

PLEASE FOLLOW INSTRUCTIONS TO FILL YOUR TRAIL WARRIOR LOG SPLITTER. FAILURE TO DO SO MAY RESULT IN UNSATISFACTORY OPERATION. AN IMPROPERLY FILLED HYDRAULIC SYSTEM MAY CREATE CAVITATIONS OF THE HYDRAULIC CYLINDER AND OVERALL POOR PERFORMANCE OR MAY CAUSE DAMAGE TO YOUR TRAIL WARRIOR LOG SPLITTER.
5. Move control lever forward to extend the hydraulic cylinder all the way. (It is normal for the cylinder to not move smoothly as it purges the air from the system.) SEE FIGURE 2.

6. Move control lever to the return position until ram is retracted fully.

7. Turn off engine.

8. With cylinder in the return position with the air bleeder valve still in the open position, open the filler cap very slowly to allow any air to escape that may have been trapped in the reservoir during the initial filling procedure.

9. Top off the reservoir by adding up to 3 more quarts of hydraulic fluid.

NOTE: Some units may not take the complete 3 quarts as they were filled and tested at the factory prior to shipment and some residual fluid still remains in the hydraulic system.

Your Trail Warrior is now properly filled and ready for use. You have the correct amount of fluid in the reservoir when you can see the fluid at least halfway up the fill spout.

Once the log splitter is filled with fluid you can close the air bleeder valve by turning it all the way clockwise.

TIP: If your ram still does not travel smoothly, there may still be air in the hydraulic system or your fluid level is too low. If this is the case, with the engine turned off and the filler cap on, open your air bleeder valve and move the hydraulic control valve from the forward to return position a few times to purge any air that may be trapped in the hydraulic system.

NOTE: Doing this procedure with the filler cap removed will cause any air that is in the system to expel through the filler spout. Check for proper fluid level.

FIGURE 2

![Image of hydraulic valve positions: Forward, Return, Valve Positions]
STARTING:

IMPORTANT: THE ENGINE AND HYDRAULIC RESERVOIR ARE SHIPPED WITHOUT OIL. SEE THE ENGINE OPERATOR’S MANUAL PACKED WITH YOUR LOG SPLITTER FOR THE TYPE OF CRANK-CASE OIL, FUEL, ETC. THE ENGINE MANUFACTURER RECOMMENDS LEAD-FREE GASOLINE ONLY.

1. The hydraulic reservoir should be filled with an SAE 10 hydraulic oil. If hydraulic oil is difficult to obtain, automatic transmission fluid can be substituted. Use only clean oil and take care to prevent dirt from entering the hydraulic reservoir. **DO NOT** mix hydraulic oil and transmission fluid.

ENGINE OIL RECOMMENDATIONS:

STARTING INSTRUCTIONS:

1. Turn fuel valve to “ON” position
2. Move the throttle lever to “FAST”. Always operate the engine with throttle lever in the “FAST” position.
3. Move choke control lever to “CHOKE” position.
4. Grasp rope handle and pull slowly until resistance is felt. Then pull rapidly to start engine and avoid engine kickback.
5. Allow the engine to warm up. If operating in warm weather, move the choke control lever toward “RUN” in small increments over several seconds. For cold weather operation do this procedure over several minutes. Operate with choke lever in the “RUN” position.
6. To stop engine, move the throttle lever to the “SLOW” position.  
   **NOTE:** The maximum governed speed on the engine is preset at the factory to 3600 RPM no load speed. When splitting wood, the throttle should be set at the maximum setting to develop the horsepower required for the pump.
7. Turn switch to “OFF” position
   **NOTE:** On the Viper engine, the switch is located on the side of the engine near the log splitter tank assy.

USING YOUR W1265V LOG SPLITTER:

Your log splitter can be used on or off the telescopic tongue assembly depending on which assembly configuration you choose to use. (See assembly instructions located in rear of this manual.)

For your convenience the ram/beam assembly can be elevated, which may be a more comfortable working position in some cases. To raise the beam/ram assembly, simply place one foot on the axle and pull with an upward and back motion. Once the ram/beam is elevated, be sure to lock the beam into position with locking pin.
TOWING:

1. The W1265V is designed for **OFF ROAD USE ONLY**. It is designed to be pulled behind a lawn tractor, garden tractor or ATV only. **DO NOT exceed 15 mph when towing the W1265V log splitter.**

2. The log splitter is equipped with a telescopic tongue which is designed to extend to accommodate ATV racks, extensions, or anything currently protruding from back of an ATV. **DO NOT over extend the telescopic tongue as personal injury may result.** SEE FIGURE 1.

3. Your log splitter is equipped with a tandem hitch which allows you to tow an off road ATV/garden type trailer etc. at the same time. **DO NOT exceed 100 lbs. tongue weight.** SEE FIGURE 2.

4. Make sure the beam is in the lowest position (Transport Position) and the locking pin is securely attached before towing your log splitter.

5. Your log splitter can be used on or off the telescopic tongue assembly depending on which assembly configuration you choose to use. (See set-up instructions located preceeding this section.)

6. For your convenience the ram/beam assembly can be elevated, providing more comfort in certain situations. To raise the beam/ram assembly, pull lock pin first then replace when up. Place one foot on the axle and pull with an upward and back motion. Once the ram/beam is elevated be sure to lock the beam into position with locking pin.

---

**WARNING**

**ALWAYS WEAR SAFETY GLASSES DURING OPERATION.**
**KEEP HANDS AND FEET CLEAR OF RAM, STRIPPER CHANNELS AND FOOT PLATE AT ALL TIMES.**
**DO NOT OPERATE LOG SPLITTER IF THE OIL LEVEL IS MORE THAN TWO INCHES FROM TOP OF TANK WHEN THE WEDGE IS IN THE RETURNED POSITION.**

---

**FIGURE 1**

**FIGURE 2**

**TRANSPORT POSITION**

**NON TRANSPORT POSITION**
OPERATION:

1. Set up the log splitter on a clear, level area and block the wheels.
2. Place a log on the beam against the foot plate. Make sure that the log is placed securely on the foot plate and against the beam.
3. Depress the control valve handle so that the cylinder will drive the log into the wedge. Extend the cylinder until the log splits or travels to the end of its stroke. If the log has not completely split after the cylinder has reached the end of its extension, retract the cylinder.

**IMPORTANT:** LEAVING THE VALVE IN THE “ACTUATE” POSITION AT THE END OF THE STROKE MAY DAMAGE THE PUMP. ALWAYS USE EXTRA CARE WHEN SPLITTING LOGS WITH ENDS NOT SQUARE.

**NOTE:** For operation in wooded areas, obtain a spark arrestor for the exhaust system from the manufacturer of your engine. See also Fire Prevention in the Safety information section of this manual.

**IMPORTANT:** TO EXTEND THE LIFE OF THE HYDRAULIC CYLINDER, AVOID “BOTTOMING OUT” WEDGE PLATE TO THE FOOT PIECE. TO CONFORM WITH INDUSTRY SAFETY RECOMMENDATIONS, THE WEDGE STOPS TWO INCHES FROM THE END OF THE STROKE.

MAINTENANCE:

2. Always check the fluid level of the hydraulic reservoir before operation. Fluid must be no more than two inches from top of tank when the wedge is in the return position. Operating the log splitter without an adequate fluid supply will cause severe damage to the hydraulic pump.
3. All replacement parts must meet manufacturer's specifications.
4. Check air pressure of tires before each use. Maintain pressure of 30 psi.

TRAIL WARRIOR QUICK SPLIT
12 TON LOG SPLITTER

1-YEAR LIMITED WARRANTY

Terms and Conditions

Ardisam, Inc., a manufacturing company, warrants this EARTHQUAKE® TRAIL WARRIOR QUICK SPLIT 12 TON LOG SPLITTER to be free from defects in the material or workmanship for a period of one year from the date of purchase. During the one year warranty of this product, Ardisam will furnish 100% parts and labor to correct any defect caused by faulty material or workmanship. Any unit used in a commercial application is covered for a period of 90 days after purchase.

If warranty work needs to be done, contact your place of purchase or Ardisam, Inc. for an authorized service center in your area. Ardisam will make the necessary repairs if a service center is not available. To obtain warranty service and/or replacement instructions, you must have prior approval from Ardisam before shipping your package to us by calling our customer service department at 800-345-6007 for a return material authorization number (RMA#). All items must be shipped prepaid. Ardisam, Inc. will at no charge, repair or replace, at their discretion, any defective part which falls under the conditions stated above.

Ardisam retains the right to change models, specifications and price without notice. This product if used as intended, will give you years of trouble free service. We hope you will enjoy the quality of our products for years to come.

For replacement parts, phone 800-345-6007 or go online to www.GetEarthquake.com.

This warranty applies to the original owner with a proof of purchase and is not transferable. It supersedes all other warranties either expressed or implied and all other obligations to liabilities on our part. Ardisam, Inc. does not assume, and does not authorize any other person to assume for us, any liability in connection with the sale of our products.

The warranty applies only to products which have not been subjected to negligent use, misuse, alteration, accident or repairs made by anyone not certified by Ardisam, Inc. This guarantee is void unless the warranty card is properly filled out and received by Ardisam, Inc., within 30 days of purchase or go to www.GetEarthquake.com for online registration.
