

Land Clearing

- Reduce log /stumps size to help minimize stress on machinery – loaders, hauling equipment, grinders, etc.
- Increase hauling effectiveness by reducing air space resulting in higher capacity per load, saving time, effort and fuel.
- On site chipping/shredding option – instead of hauling large logs and stumps off site, you can use a Black Splitter and a smaller portable chipper to process any size log on site – reducing or eliminating hauling costs or need for larger more expensive tub grinders.
- Reduce down time for employees – log piles can be processed (by switching attachments easily) while in between tasks.
- Smaller job/minor cleanup option – Black Splitter attachments can reduce, pick up, load and/or chip using small portable equipment so there is no need to transport larger more expensive machinery, making your operation more agile and effective.
- It's Flexible – with the proper mounting plates it can be used on Skid Steer loaders, Excavators, or back hoe's making the product useful on any type of equipment for many various jobs.

Tree Services

- Using smaller Skid Steer machines companies can split, and transport large logs through fence lines and get back to areas where typical heavy equipment can't reach or get to eliminating the need for heavy manual labor or passing on potential job opportunities.
- Additional profit center – up charging customers to reduce logs to a manageable size (quartering large logs takes minutes) to the point where a homeowner can then manage the rest of the splitting using Chainsaws and axes. This allows additional profit and saving on hauling and disposal costs.
- Stump splitting on Blow down/storm damage. Tree services are using the Black Splitter products (on Small machines – skid steer/mini excavators) horizontally piercing into the wood breaking apart uprooted stumps into smaller manageable pieces which can now be removed without the use of heavy equipment.
- Unload and reduce logs into quarters within minutes, increasing usable yard space.
- Available attachments allow for stump grinding, and auger options increasing productivity and usefulness.
- Reduce log /stump size to reduce stress on machinery – loaders, hauling equipment, grinders
- Increase hauling effectiveness by reducing air space resulting in higher capacity per load
- On site chipping/shredding option – instead of hauling off site, you can use a smaller portable chipper to process any size log on site – reducing or eliminating hauling costs or need for larger more expensive tub grinders.
- Smaller job/minor cleanup option – can reduce, pick up, load or chip using small portable equipment so there is no need to transport larger more expensive machinery.
- Flexible – with the proper mounting plates it can be used on Skid Steer loaders, Excavators, or back hoe's making the product useful on any type of equipment for many various jobs.

Firewood Processors/Mulch producers

- Increase your saleable stockpile by being able to take in and use large diameter logs and stumps that were previously un-useable.
- Reduce operation costs and overhead by making operations more efficient and reducing the need for manual labor performing difficult and often dangerous jobs.
- Increase production with faster, easier processing of oversized logs and stumps.
- Save money on future purchases by being able to purchase equipment that can handle smaller diameter products by pre-processing with a Black Splitter product.
 - Example buying a firewood processor that handles a 14" max diameter log (DYNA SC-12 Firewood Processor) for \$11,000 instead of having to buy one that handles 22" max diameter log (DYNA SC-16 Firewood Processor) for \$40,400 by being able to pre-process logs with a Black Splitter unit. Factoring a Black Splitter purchase into the equation that's a savings of \$21,900 - \$18,900 depending on the Black Splitter model purchased.
 - Buying a commercial chipper instead of having to purchase a tub/whole tree grinder.

Property Management/Storm Cleanup

- Using smaller Skid Steer machines companies can split, and transport large logs through fence lines and get back to areas where typical heavy equipment can't reach or get to eliminating the need for heavy manual labor or passing on potential job opportunities.
- On site chipping/shredding option – instead of hauling off site, you can use a smaller portable chipper to process any size log on site – reducing or eliminating hauling costs or need for larger more expensive tub grinders.
- Smaller job/minor cleanup option – can reduce, pick up, load or chip using small portable equipment so there is no need to transport larger more expensive machinery.
- Additional profit center – up charging customers to reduce logs to a manageable size (quartering large logs takes minutes) to the point where a homeowner can then manage the rest of the splitting using Chainsaws and axes. This allows additional profit and saving on hauling and disposal costs.
