MVH1724A.2

Owner’s Manual
Instructions for Assembly, Testing, Operation,
Servicing and Storage

24, 30, & 37 Ton Log Splitters: Outdoor hydraulic powered machine that splits wood logs.

WARNING

READ and UNDERSTAND this manual completely before using log splitter.

All operators of this equipment must read and completely understand all safety information, operating instructions, maintenance and storage instructions. Failure to properly operate and maintain the log splitter could result in serious injury to the operator and bystanders from moving parts that can crush or cut, flying objects, burns, fire or explosion, escaping high pressure hydraulic fluid, or carbon monoxide poisoning in particular, be aware of the following hazards.

Crush and Cut Hazards
Moving parts can crush and cut hands and fingers. Keep hands clear of endplate, wedge, logs, and log dislodger/strippers while splitting.

High Pressure Hydraulic Fluid Hazards
High fluid pressures and temperatures are developed in hydraulic log splitters. Hydraulic fluid escaping through even a pin-size hole opening can puncture skin and cause severe blood poisoning. Inspect hydraulic system regularly for possible leaks. Never check for leaks with your hand while the system is pressurized. Seek medical attention immediately if injured by escaping fluid.

Fire Hazards
- If your log splitter is intended for use near an ignitable forest, brush, or grassy covered land, the engine exhaust should be equipped with a spark arrester. See the "Specifications" section of this manual to determine if your splitter already has a spark arrester. If not equipped, call Brave Product Support for ordering information.
- Keep a class ABC fire extinguisher with you.

STOP!
ADD OIL TO ENGINE BEFORE USING: Engine is shipped without oil. DO NOT start log splitter without first adding oil.
ADD HYDRAULIC OIL: Your log splitter was shipped without hydraulic oil. Refer to Periodic Maintenance section of this manual for instructions on filling the hydraulic reservoir.
PRIME THE PUMP: The pump on your log splitter needs to be primed before use. Refer to Initial Setup section for instructions.
INSPECT COMPONENTS: Closely inspect to make sure no components are missing or damaged.
See Initial Unpacking and Set-up for instructions and for whom to contact to report missing or damaged parts.

Any Questions, Comments, Problems or Parts Orders
Call Brave Product Support 1-800-350-8739

Thank you for purchasing your Brave log splitter!

**About Your Log Splitter:**
This log splitter is a machine designed to split wood logs using a hydraulically powered moving wedge. The log splitter's gasoline engine is used to pressurize the hydraulic system.

This log splitter is designed to split logs *lengthwise with the grain only*.

This log splitter model is capable of splitting logs up to 24” long and 16” in diameter.

Your splitter can be used in either a vertical or horizontal splitting position:
- When the splitter is set up to operate in the **horizontal splitting position**, a log is placed on the horizontal beam and the wedge moves horizontally into the end of the log to split it.
- When the splitter is set up to operate in the **vertical splitting position**, the log is placed on the endplate, upright on its end, and the wedge moves down into the top of the log to split it.

The **horizontal splitting position** is used for lighter logs that can be easily loaded onto the beam. The **vertical splitting position** is used for heavier logs that are difficult to load onto the beam.

The technical specifications for your log splitter are provided in the Specifications section of this manual.

**WARNING**
This log splitter uses a high-pressure hydraulic system to generate a very strong splitting force.

*Read the manual completely* before using the machine to understand how to safely operate and maintain it.

Follow all safety precautions presented throughout this manual. A summary of important safety information can be found at the end of this manual.

**Contact Brave Product Support at 1-800-350-8739 for any questions about the appropriate use of this log splitter and/or optional accessories.**

**Warranty Registration:**
Please fill out and submit the warranty registration page at the end of the manual so that we have your contact information for any future product literature or replacement parts you may need. You can also register online at www.braveproducts.com.

**Attention: All Rental Companies and Private Owners who loan this equipment to others!**
All persons to whom you rent/loan the log splitter must have access to and read this manual. Keep this owner's manual with the splitter at all times and advise all persons who will operate the machine to read it. You must provide instruction on how to safely operate the splitter and remain available to answer any questions a renter/borrower might have.
Always make sure safety labels are in good condition. If a safety label is missing or not legible, order new labels or unsafe operation could result. Contact Brave Product Support at 1-800-350-8739

ESCAPING HIGH PRESSURE HYDRAULIC FLUID HAZARD

High fluid pressures and temperatures are developed in the hydraulic system. Hydraulic fluid escaping through even a pin-size hole opening can puncture skin and cause blood poisoning.

- Inspect hydraulic system regularly for leaks.
- Never check for leaks with your hand while system is pressurized.
- Seek medical attention immediately if injured by escaping fluid.

FLOW CONTROL LEVER OPERATION

Moving log splitter by hand:
- Lock both in horizontal position (top-up models only).
- Lock turntable lever in UP position.
- Lock support leg in UP position if equipped.
- Close all gates to enclose log splitter up or down slope by hand.

LOG STRIPPER

Keep hands clear of wedge and log stripper

POISONOUS GAS

This product's use gives off carbon monoxide, an odorless gas that can kill you.

- Only use outdoors and away from air intakes.
- Never use inside homes, garages, or sheds. Even if you run a fan or open doors and windows.

WARNING

Moving parts can crush and cut. Pieces can fly out while splitting. Follow safety rules for operating the log splitter or serious injury could result.

- Read the Owner's Manual completely before operating.
- Only one person should operate the log splitter. If an assistant is helping to load logs, the operator should not actuate controls until the assistant is at least 10 ft away.
- Split wood in direction of the grain only.
- Hold bark side of logs when loading.
- Keep hands away from wedge, endplate/ram, and partly split logs.
- Never leave log splitter unattended during operation.

BURN HAZARD

Do not touch hot muffler. Muffler may be hot even if the unit is stopped. Allow unit to cool before servicing.

# Initial Setup

**IMPORTANT!**

Engine is shipped **without** oil. **DO NOT** start the engine before adding oil.

See Assembly Instructions section of this manual on page 37 to assemble the log splitter before setup.

| Step One: Inspect Log Splitter Components | Closely inspect all log splitter components.  
(See Machine Components section of this manual for diagram of components.) |
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• If you have missing or damaged components, please contact Product Support at 1-800-350-8739.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Step Two: Add Oil to Engine</th>
<th>Add oil to the engine. Using a funnel, add SAE 10W-30 oil up to the FULL mark on the dipstick. (See engine Owner's Manual for oil capacity and location of fill cap.)</th>
</tr>
</thead>
</table>

<table>
<thead>
<tr>
<th>Step Three: Add Hydraulic Oil to Reservoir</th>
<th><strong>WARNING:</strong> High fluid pressures and temperatures are developed in hydraulic log splitters. Hydraulic fluid escaping through a pin-hole sized opening can burn or puncture skin, resulting in wounds that could cause blood poisoning, infection, disability, gangrene, amputation, or death. Therefore, the following instructions should be heeded at all times when inspecting or servicing the hydraulic components of the log splitter.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• NEVER check for leaks with your hand. Leaks can be located by holding a piece of cardboard or wood (at least two feet long) with your hand at one end and passing the other end near the suspected area (wear eye protection). Look for discoloration of the cardboard or wood.</td>
</tr>
<tr>
<td></td>
<td>• NEVER adjust the pressure of the pump or valve.</td>
</tr>
<tr>
<td></td>
<td>• If injured by escaping fluid, no matter how small the wound is, see a doctor at once. A typical injection injury may be a small wound that does not look serious. However, severe infection or reaction can result if proper medical treatment is not administered immediately by a doctor who is familiar with injection injuries.</td>
</tr>
</tbody>
</table>

**IMPORTANT**

The hydraulic system oil filter for your log splitter is not factory installed. Make sure the filter is installed before attempting to fill the hydraulic tank or start the engine. (Installation instructions are provided in the “Assembly Instructions” section and are also printed on the side of the filter).

1. Remove hydraulic oil dipstick.
2. Refer to the **Specifications** section for approximate hydraulic oil capacity.
3. Fill reservoir with 10wt AW32, ASLE H-150, or ISO 32 oil. Use a funnel
4. Replace hydraulic oil dipstick and check that oil level reads full. Note: Do not thread in dipstick when checking oil level.
Initial Setup

**Step Three:**
Add Hydraulic Oil to Reservoir (continued)

5. Disconnect the spark plug wire from the spark plug. This prevents the engine from starting until the hydraulic pump and cylinder are completely filled with oil. Make sure the spark plug wire is held away from the spark plug with string or other nonconductive material.

6. Push the valve control handle with one hand to the forward (extend) position (towards the front of the cylinder). Pull on the starter grip recoil at least 20 times so that hydraulic fluid has cycled through the pump.

7. Reconnect the spark plug wire to the spark plug.

8. Start engine and use control valve handle to extend and retract wedge five (5) times to remove air from the high pressure lines.

9. With wedge retracted, shut off engine.

10. Check oil level again. Fill if necessary.

11. Replace hydraulic oil fill/vent cap.

**WARNING:** NEVER remove the hydraulic oil fill cap when the engine is running or hot. Hot oil can escape causing severe burns. Allow log splitter to cool completely before removing hydraulic oil fill cap.

**Note:** If the log splitter will be run for long periods of time in outdoor temperatures above 70°F, we recommend changing the hydraulic oil to DEXRON III.

**Step Four:**
Lubricate Beam

Lubricate the surface of the beam with grease. This will help prevent wear between the wedge keepers and the beam.

Apply grease to the top of the beam and underneath the edge of the beam, where the wear pads travel.
### Moving and Towing to the Job Site

**WARNING**

The log splitter is heavy. It can crush and cause serious injury if it rolls out of control or tips over.

Follow the instructions below for safely moving and towing the log splitter.

---

**Moving the log splitter:**

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. <strong>Place in Horizontal Position</strong></td>
<td>Make sure the log splitter is locked in the horizontal position with horizontal latch before moving. NEVER move log splitter when it is in vertical configuration because it will be unstable and could tip.</td>
</tr>
<tr>
<td>2. <strong>Engine Off</strong></td>
<td>IMPORTANT: Make sure log splitter engine is off. Never move the log splitter with its engine running.</td>
</tr>
<tr>
<td>3. <strong>Fuel Valve Off (if equipped)</strong></td>
<td>Turn fuel valve off to prevent carburetor flooding and reduce the chance of fuel leakage. Refer to Engine owner's manual for fuel valve location.</td>
</tr>
<tr>
<td>4. <strong>Lock Support Leg DOWN</strong></td>
<td>Lock support leg in DOWN position before you move the log splitter.</td>
</tr>
</tbody>
</table>
| 5. **Move Log Splitter to Work Site or Tow Hitch** | Move log splitter by hand either directly to chosen work site or to vehicle hitch for towing.  
(See Step Three: Before Each Use - Work Site Selection and Set-Up)  
**Important Safety Instructions:**  
- **Hills.** Do not move the log splitter up or down hills by hand—use a towing vehicle.  
- **No riding.** Never allow anyone to sit or ride on the log splitter.  
- **No cargo.** Never transport cargo or wood on the log splitter. |
# Moving and Towing to the Job Site

<table>
<thead>
<tr>
<th><strong>Towing:</strong></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>1. Read Instructions</strong></td>
<td>Review towing safety instructions in your vehicle manual.</td>
</tr>
<tr>
<td><strong>2. Check Tires</strong></td>
<td>Make sure tires are fully inflated and in good repair.</td>
</tr>
<tr>
<td></td>
<td>☢️ <strong>WARNING:</strong> · Do not over-inflate tires. Serious injury can occur if tire explodes.</td>
</tr>
<tr>
<td></td>
<td>· When seating a bead after repair, do not exceed 60 PSI. Pressures higher than 60 PSI can cause the tire and wheel to rupture and explode.</td>
</tr>
<tr>
<td><strong>3. Engine Off</strong></td>
<td><strong>IMPORTANT:</strong> Make sure log splitter engine is off.</td>
</tr>
<tr>
<td></td>
<td>Never move the log splitter with its engine running.</td>
</tr>
<tr>
<td><strong>4. Fuel Valve Off</strong></td>
<td><strong>Turn fuel valve off</strong> to prevent carburetor flooding and reduce the chance of fuel leakage. Refer to Engine owner's manual for fuel valve location.</td>
</tr>
<tr>
<td>(if equipped)</td>
<td></td>
</tr>
</tbody>
</table>
Moving and Towing to the Job Site

5. Attach to Hitch (2” ball)  

<table>
<thead>
<tr>
<th>Steps</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>Attach log splitter's coupler to a class 2 or higher hitch with 2” ball (only).</td>
</tr>
<tr>
<td>2.</td>
<td>Adjust coupler to ball by raising locking lever and turning lock nut with wrench.</td>
</tr>
<tr>
<td>3.</td>
<td>Proper adjustment is obtained when coupler is as tight as possible on ball and locking lever can still be opened and closed.</td>
</tr>
<tr>
<td>4.</td>
<td>Lock lever closed to secure the attachment.</td>
</tr>
</tbody>
</table>

5. Insert pin into locking lever to ensure it does not unlock while towing.

6. Attach Safety Chains  

<table>
<thead>
<tr>
<th>Steps</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>Two safety chains must be used while towing.</td>
</tr>
<tr>
<td>2.</td>
<td>Cross safety chains under the coupler allowing only enough slack for vehicle turns.</td>
</tr>
</tbody>
</table>
### Moving and Towing to the Job Site

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>7.</td>
<td>Lock Support Leg UP</td>
<td>To provide adequate ground clearance while towing, secure the support leg in the UP position.</td>
</tr>
<tr>
<td></td>
<td><img src="image" alt="Lock support leg in UP position" /></td>
<td></td>
</tr>
</tbody>
</table>
| 8.   | Tow to Desired Location | Tow log splitter carefully to desired work site. (See Step Three: Before Each Use – Work Site Selection and Set-Up)  
**Important safety instructions:**  
- **Added length.** Be aware of the added length of the splitter.  
- **Speed limit.** Never tow this log splitter over 45 mph. Faster speeds may result in loss of control.  
- **Rough terrain.** Drive slowly and take extra caution when traveling over rough terrain.  
- **On public roads.** If towing on a public road, make sure to comply with all local, state, and federal towing requirements. It is the sole responsibility of the purchaser to obtain licensing, trailer lights, safety chains or signage, as needed to comply.  
- **Unattended.** Turn off the towing vehicle before leaving the splitter unattended.  
- **Under the influence.** Never tow or operate this splitter while under the influence of alcohol, drugs, or medication. |
|      | ![Tow log splitter carefully to desired work site](image) | |
| 9.   | Lock Support Leg DOWN and Unhitch | Lock support leg in the DOWN position and disconnect from vehicle. NEVER operate log splitter while it is attached to the vehicle.  
1. Lock the support leg down and open the coupler latch assembly.  
2. Unhitch from vehicle. |
# Before Each Use – Inspection/Maintenance

**Step One:** Inspect and maintain log splitter before each use

If the log splitter has been used previously, it must be inspected and maintained **BEFORE EACH SUBSEQUENT USE.**

## WARNING

| ALWAYS shut off the engine, disconnect the spark plug, and relieve system pressure before inspecting, cleaning, adjusting, or repairing the splitter. Relieve system pressure by moving Split Control Lever back and forth several times. |

**IMPORTANT:**

If a part needs replacement, only use parts that meet the manufacturer's specifications. Replacement parts that do not meet specifications may result in a safety hazard or poor operation of the log splitter.

<table>
<thead>
<tr>
<th>1. Engine Off / Relieve Pressure</th>
<th>Perform all inspections/repairs with the engine off and hydraulic system pressure relieved.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>1. Make sure engine is off and cool.</td>
</tr>
<tr>
<td></td>
<td>2. Disconnect the spark plug.</td>
</tr>
<tr>
<td></td>
<td>3. Relieve all hydraulic system pressure by moving the Split Control Lever back and forth several times.</td>
</tr>
<tr>
<td>2. Remove Debris</td>
<td>Remove debris from engine, muffler, and moving parts.</td>
</tr>
<tr>
<td></td>
<td>1. <strong>Engine debris:</strong> Debris on a hot engine can be a fire hazard. Clean debris and chaff from engine cylinder head, cylinder head fins, fan housing/recoil starter, and muffler areas. Avoid contact with hot muffler.</td>
</tr>
<tr>
<td></td>
<td>2. <strong>Other debris:</strong> Debris on moving parts can cause excess wear. Clear debris from the beam, wedge, log dislodger, and endplate.</td>
</tr>
<tr>
<td>3. Fuel Tank / Lines</td>
<td>Check fuel tank and fuel lines for leaks.</td>
</tr>
<tr>
<td></td>
<td>Any fuel leak is a fire hazard. Fix any fuel leaks before starting engine.</td>
</tr>
<tr>
<td>4. Mechanical Parts</td>
<td>Check to be sure that all nuts and bolts are tight to ensure the log splitter is in safe working condition</td>
</tr>
</tbody>
</table>

![Diagram of log splitter](image)

Apply grease to the top of the beam and underneath the edge of the beam, where the wear pads travel.
| 5. Hydraulic System | Check the hydraulic system carefully:  
1. Visually inspect all hoses, tubing, clamps/fittings, pump, and cylinder for cracks, fraying, kinks, or other damage.  
2. Check all components for oily residue, which may indicate a leak.  

Do NOT operate the log splitter if there is any indication of damage or oily residue. Small leaks in hydraulic lines can cause severe injuries and can also be an indication of catastrophic failure in the near future. The life of hydraulic hoses may be from a few months to a few years, depending on use and storage patterns.  

⚠️ WARNING: High fluid pressures and temperatures are developed in hydraulic log splitters. Hydraulic fluid escaping through a pin-hole sized opening can burn or puncture skin, resulting in wounds that could cause blood poisoning, infection, disability, gangrene, amputation, or death. Therefore, the following instructions should be heeded at all times when inspecting or servicing the hydraulic components of the log splitter:  
  • Stop the engine, disconnect the spark plug, and move all control valve handles back and forth to relieve pressure before changing or adjusting hydraulic system components such as hoses, tubing, fittings, or other components.  
  • NEVER check for leaks with your hand. Leaks can be located by holding a piece of cardboard or wood (at least two feet long) with your hand at one end and passing the other end near the suspected area (wear eye protection). Look for discoloration of the cardboard or wood.  
  • NEVER adjust the pressure setting of the pump or valve.  
  • If injured by escaping fluid, no matter how small the wound, see a doctor at once. A typical injection injury may be a small puncture wound that does not look serious. However, severe infection or reaction can result if proper medical treatment is not administered immediately by a doctor familiar with injection injuries.  

| 6. Hydraulic Oil Level | Check the hydraulic oil level. Fill as needed – check that oil level reads full. Note: Do not thread in dipstick when checking oil level.  

⚠️ WARNING: NEVER remove the hydraulic oil fill cap when the engine is running or hot. Hot oil can escape causing severe burns. Allow log splitter to cool completely before removing hydraulic oil fill cap.  

| 7. Engine | Inspect and perform engine maintenance as directed in the engine manual. |
8. Spark Arrestor Muffler | If the engine is equipped with a spark arrestor muffler, clean and inspect it regularly (follow spark arrestor manufacturer's service instructions). Replace if damaged.

9. Tires | Make sure tires are fully inflated and in good repair if you will be towing the splitter. See tire sidewall for recommended tire pressure.

**WARNING:**
- Do not over-inflate tires. Serious injury can occur if tire explodes.
- When seating a bead after repair, do not exceed 60 PSI. Pressures higher than 60 PSI can cause the tire and wheel to rupture and explode.

10. Shields / Guards | Replace all guards and shields after servicing the log splitter.
**Before Each Use – Fueling**

**Step Two: Fueling**

<table>
<thead>
<tr>
<th>Step</th>
<th>Instruction</th>
</tr>
</thead>
</table>
| 1. Engine Off and Cool | The engine must be off and allowed to cool at least two minutes before adding fuel.  

⚠️ **WARNING:** A running engine is hot enough to ignite fuel. Never add fuel or remove gas cap if engine is running or still hot. |
| 2. Outdoor Location | Fill fuel tank outdoors – never indoors.  

⚠️ **WARNING:** Gasoline vapors can ignite if they collect inside an enclosure. Explosion can result. |
| 3. Remove Gas Cap | Remove engine gas cap. |
| 4. Add Gasoline | Add gasoline through fill opening from a UL listed container.  

**Important Safety Instructions:**  
- **Use approved container.** NEVER pump fuel directly into engine at gas station. Static charge can build and ignite fuel. Use a UL listed fuel container to transfer gas to the engine.  
- **Don't overfill.** DO NOT overfill the gas tank. Allow at least 1/2" of empty space below the fill neck to allow for fuel expansion  
- **Heat / flames / sparks.** Stay away from sources of heat, flame, or sparks while adding fuel.  

| 5. Spills / Splashes | Clean up fuel spills /splashes immediately.  
1. Move the log splitter away from spilled fuel on the ground.  
2. Wipe fuel off engine and wait 5 minutes for excess fuel to evaporate before starting engine.  
3. Gas soaked rags are flammable and should be disposed of properly.  
4. If gasoline is spilled on your skin or clothes, change clothes and wash skin immediately. |
| 6. Replace Gas Cap | Replace gas cap securely before starting engine. |
| 7. Gasoline Storage | Store extra gasoline in a cool, dry place in a UL listed, tightly sealed container. |
Step Three: Work site selection and log splitter setup

<table>
<thead>
<tr>
<th>1. Select Location</th>
<th>Select an appropriate location for operating the log splitter. Inspect worksite for possible hazards before each use.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Requirements:</td>
<td>1. Dry-level surface with good footing. Stay clear of areas with mud, ice, tall grass, weeds, brush, or snow.</td>
</tr>
<tr>
<td></td>
<td>2. Outdoors, away from air intakes.</td>
</tr>
<tr>
<td><strong>WARNING:</strong></td>
<td>The running engine gives off carbon monoxide, a poisonous gas that can kill you. You CANNOT smell it, see it, or taste it.</td>
</tr>
<tr>
<td></td>
<td>• ONLY run log splitter OUTDOORS and away from air intakes. NEVER run log splitter inside homes, garages, sheds, or other buildings or semi-enclosed spaces. These spaces can trap poisonous gases, EVEN if you run a fan or open windows.</td>
</tr>
<tr>
<td></td>
<td>• If you start to feel sick, dizzy, or weak while using the log splitter, shut off the engine and get to fresh air RIGHT AWAY. See a doctor. You may have carbon monoxide poisoning.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>2. Fire Precautions</th>
<th>Take the following precautions against fire:</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. <strong>IMPORTANT:</strong></td>
<td>If your splitter will be used near any unimproved forest, brush, or grassy covered land, then engine must be equipped with a spark arrester.</td>
</tr>
<tr>
<td></td>
<td>(See the &quot;Specifications&quot; section of this manual to determine if your splitter already has a spark arrester. Contact Brave Product Support at 1-800-350-8739 for information about obtaining a spark arrester for your log splitter if it is unequipped.)</td>
</tr>
<tr>
<td>2. Make sure you comply with applicable local, state, and federal codes.</td>
<td></td>
</tr>
<tr>
<td>3. Keep a class ABC fire extinguisher available as a precautionary measure when operating the log splitter in dry areas.</td>
<td></td>
</tr>
</tbody>
</table>

| 3. Position Splitter | Position muffler at least 7 ft. from combustible or flammable objects during operation. Hot exhaust fumes from engine could cause fire. Also, hydraulic oil leaking or spraying on hot engine can ignite. |

| 4. Lock Support Leg DOWN | Lock the support leg in the DOWN position. |

| 5. Block Wheels | Block the wheels to prevent unintended movement of the log splitter. |

| 6. Apply grease | Apply grease to beam where the wedge travels. |
WARNING

Before starting this log splitter, review the following instructions and safety information for safe operation of the log splitter.

Failure to follow these rules may result in serious injury to the operator or bystanders from moving parts that crush, cut, or entangle from flying objects, burns, fire, falling or tripping, or from carbon monoxide poisoning.

General Safety Information:

- **Read manual.** Do not allow anyone to operate the log splitter who has not read the Owner's Manual or has not been instructed on the safe use of the splitter. The log splitter owner should instruct all operators in safe log splitter operation.

- **Age restrictions.** Never allow anyone under 16 years old to operate the log splitter. Anyone 16 years and older must be trained and supervised by a trained adult.

- **Intended use.** Log splitters should only be used for splitting wood logs, lengthwise with the grain. Do not use for other purposes as unforeseen hazards may result.

- **Modifications.** Never modify or alter the log splitter in any way. Modifications can create serious safety hazards and will void the warranty.

- **Attachments.** Never add attachments to the splitter, except for authorized accessories supplied by the manufacturer with instructions for safe installation and use.

- **Engine speed.** The maximum engine speed is preset at a safe limit. Never attempt to modify the engine speed setting to run at a higher speed.

- **Fuel/exhaust system.** NEVER modify or add to the exhaust system, fuel tanks, or fuel lines. Fire can result.

- **Remote control.** NEVER attach a rope, cable, or other remote device to the splitting control.

- **Splitting wedge.** NEVER attempt to change the height or speed of the splitting wedge.

- **Pressure setting.** NEVER increase the pressure setting of the pump or control valve.

- **Safety equipment / controls.** Always operate the log splitter with all safety equipment in place and in good working order, and all controls properly adjusted for safe operation.

- **Know how to stop.** Be thoroughly familiar with all controls and with the proper use of the equipment. Know how to stop the log splitter and relieve system pressures quickly if needed.

- **Operating speed.** Always operate the log splitter at the manufacturer's recommended speed. The maximum speed of the engine pump and wedge are preset within safe limits.

- **Daylight only.** Only use the log splitter in daylight so you can see what you are doing.

- **Smoking / sparks.** Never smoke while operating the log splitter, and never operate near sources of sparks or flames.

- **Under the influence.** Never operate, or let anyone else operate, the log splitter while under the influence of alcohol, drugs, or medication.

- **Unattended.** Never leave the machine unattended while the engine is running.

- **Refueling.** Never refuel the engine until it has cooled at least two minutes.

- **Adjusting / repairing.** Always make sure the engine is off before cleaning, repairing or adjusting the splitter, except as recommended by the manufacturer. In addition, disconnect the spark plug and move all control handles back and forth to relieve system pressure before changing or adjusting hydraulic system components such as hoses, tubing, fittings or other components.

- **Replace labels.** Always make sure safety labels are in place and in good condition. If a safety label is missing or not legible, order new labels because unsafe operation can result. Call 1-800-350-8739 to order new safety labels.
# Splitting Operation

## 1. Put on Protective Clothing / Gear

Wear the following protective clothing and safety gear:

1. **Eye protection.** Always wear safety glasses or goggles when operating the machine. Pieces of log may fly out and serious eye injury can occur.
2. **Boots.** Falling logs can crush feet. Always wear safety shoes or heavy boots when operating or helping to load logs.
3. **Gloves.** Wear snug fitting gloves without drawstrings or loose cuffs.
4. **Hearing protection.** The use of earplugs or other hearing protection device is recommended.
5. **No loose/dangling apparel.** Loose or dangling apparel can become entangled in moving parts. Never wear jewelry or loose-fitting clothing.

## 2. Lock and Block

Block the wheels to prevent unintended movement of the log splitter. Check that:

1. The support leg is locked in the DOWN position.
2. The wheels are blocked.

## 3. Set to Horizontal or Vertical:

Set log splitter into either the horizontal or vertical splitting position.

*The HORIZONTAL splitting position is used for lighter logs that can be easily loaded onto the beam. The VERTICAL splitting position is used for light logs as well as heavy logs that are difficult to load onto the beam.*

**Note:**

Musculoskeletal injury can result from lifting logs onto the log splitter if proper lifting techniques are not used or the logs are too heavy for a person's size, weight, or strength. In some cases, logs as small as 8” in diameter and 14” in length may be heavier than what some persons should be repeatedly lifting onto the splitter.

The use of the vertical splitting position can greatly reduce the need to lift logs onto the splitter. Employers are advised to consider NIOSH lifting guidelines when assigning employees to log splitting tasks for an extended period of time.

**⚠️ WARNING:** NEVER change splitting positions with the engine running. You may contact the muffler and receive serious burns.

Make sure beam is locked securely in the horizontal position by checking the horizontal lock. Support leg must be locked in the down position.
b) Set to Vertical Position

1. Pull out horizontal lock catch pin, grasp lifting handle and lift beam until it rotates into vertical position.

⚠️ WARNING: Crush hazard. The beam is heavy – do not let it just drop. It could crush fingers or cause damage to the splitter.

![Vertical Splitting Position]

2. Lock in vertical position using vertical locking pin.

3. To return to horizontal position, unlock vertical position, grasp lifting handle and lower beam carefully in a controlled manner until it rests on the tow bar, lock beam in the horizontal position with catch pin.

4. Start Engine

Start the engine.

See the engine owner's manual for engine starting instructions.

NOTE:

a) Make sure the hydraulic oil is above 10°F before starting the engine. Cold hydraulic oil can damage the hydraulic pump.

b) If outdoor air temperature is below 32°F, allow log splitter to warm up by extending and returning the wedge several times before splitting wood.

⚠️ WARNING

Burns. To avoid burns, stay clear of hot muffler if you are starting a warm engine.

Carbon monoxide. The running engine gives off carbon monoxide, a poisonous gas that can kill you. You CANNOT smell it, see it, or taste it. If you start to feel sick, dizzy, or weak while using the log splitter, shut off the engine and get to fresh air RIGHT AWAY. See a doctor. You may have carbon monoxide poisoning.

Other exhaust dangers. Engine exhaust, some of its constituents, and certain vehicle components contain or emit chemicals known to the State of California to cause cancer, birth defects, or other reproductive harm. Avoid inhalation of exhaust.
5. Load Log

Load log onto beam with a cut end against the endplate – positioned for a lengthwise cut.

**Notes:**

a) The log splitter is designed only for cutting lengthwise with the grain, NOT for cutting across the grain.

b) This log splitter is designed for cutting logs only up to a maximum of 16” in diameter and 24” long. Larger diameter logs could get stuck on the wedge and longer logs will not fit on the beam.

**WARNING:** ALWAYS keep hands and feet away from the endplate, wedge, and partially split logs while loading, operating, and unloading the log splitter.

**Important safety instructions:**

- **Hold bark side.** Hold the bark side of logs when loading or positioning, never the ends. Never place your hands or any part of your body between a log and any part of the log splitter.
  
  **NOTE for vertical position loading:** Place the log on the endplate and turn it until it leans against the beam and is stable. If the log is too big or oddly shaped, stabilize the log with wooden shims between the log and endplate or ground. DO NOT use your leg or knee to stabilize the log. NEVER stabilize the log by placing your hand on top of the log.

- **Wedge moving.** NEVER load or unload logs while the wedge is moving.

- **Straddling / reaching across.** Never straddle, reach across, or step over the beam while the engine is running and the log splitter is in the horizontal position. You could trip, actuate the controls, and get seriously injured.

- **Unsplit log pile.** Do not pile logs to be split in a place that will make you reach across the log splitter in order to load them.

- **Square log ends.** Logs that are not cut square can slide out while splitting and become a safety hazard or cause excessive force to log splitter components. Use a chainsaw to cut logs square on each end before attempting to split them.

- **Single log.** Never attempt to split more than one log at a time. Pieces of log can unexpectedly be thrown from the machine causing serious injury.

- **Split along grain.** Do not use the log splitter to split logs across the grain. Doing so will damage the log splitter and could also cause pieces of log to be thrown, injuring the operator or bystanders.

- **Forked logs.** Splitting forked logs can cause damage the log splitter. Trim the forked log with a chainsaw prior to splitting the log.

- **Changing splitting position.** Do not change splitting positions (horizontal/vertical) with the engine running. You may contact the muffler and receive serious burns. Be careful to avoid contact with hot muffler even after the engine is turned off.
6. Extend Wedge

Move Split Control Lever toward endplate to extend wedge and split log.

**SPLIT CONTROL LEVER OPERATION**

Split Log Neutral Return

---

**Important safety instructions:**

- **Operator position.** ALWAYS operate the log splitter from the manufacturer's indicated OPERATOR POSITION. (See diagram above.) Other positions are unsafe because they can increase the risk of injury from crushing, cutting, flying objects, or burns.
- **Remove hands.** Remove both hands from log before activating Split Control Lever.
- **Hand activate.** Use only your hand to operate the Split Control Lever. Never use any other body part, or a rope, cable, or other remote device to actuate the control.
- **Second person.** Many accidents occur when there is more than one person involved in loading and operating the log splitter. Only one person should operate the controls. If a second person is assisting in loading logs, the operator must NEVER actuate the Split Control Lever until the assistant and all bystanders are at least 10 feet away. NEVER allow an assistant to hold the log in place while the operator actuates the Split Control Lever.

---

7. Stop Wedge

Release Split Control Lever to stop wedge movement when log is split.

⚠️ **WARNING:** Cracks in logs can close quickly and pinch fingers. Keep fingers away from any cracks that open in partially split logs.
8. **Important STUCK LOG Procedure**

If a log does not split completely and becomes stuck on the wedge, follow the instructions below to remove the log.

A log can become stuck to the wedge if the wedge becomes embedded in the log and the log doesn't split and separate. This can happen if the log is too stringy or tough to split completely.

A stuck log will move back with the wedge on the initial attempt to retract the wedge. If this happens, retract the wedge completely to allow the log dislodger to strip the log from the wedge. Keep hands clear of log, wedge, and log dislodger while wedge is retracting.

⚠️ **WARNING:** NEVER attempt to remove a stuck log by:
- Modifying the splitter.
- Adding attachments to the splitter.

Personal injury could result from log or metal pieces flying out at high speed toward the operator or bystanders, or the splitter could become damaged.

9. **Return Wedge**

**Move Split Control Lever away from end plate to return wedge.**

Once the control valve is actuated in the return direction, the wedge is designed to keep returning by itself completely and then stop automatically.

⚠️ **WARNING:** Stay clear while the wedge is returning. It is still powerful enough on the return stroke to cause serious injury. Keep hands away from any moving parts.

10. **Remove Split Wood**

**Remove split wood from area.**

Move each log away from log splitter after it is split. Split logs left near the log splitter are a trip hazard.

11. **After use**

1. **Turn off engine.**
2. **Remove engine debris.**
   
   Debris on a hot engine can be a fire hazard. After the engine is off, clean debris and chaff from engine cylinder head, cylinder head fins, fan housing/recoil starter, and muffler areas.

   ⚠️ **WARNING:** Avoid contact with hot muffler.
3. **Return to horizontal position.**
   
   If in the vertical position, return log splitter to the horizontal position for greater stability and to prepare for transportation. Avoid contact with hot muffler.
Follow the instructions below for storing your log splitter between uses.

<table>
<thead>
<tr>
<th>Step</th>
<th>Instructions</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Retract Wedge</td>
<td>Retract the wedge completely to keep the rod protected from corrosion.</td>
</tr>
</tbody>
</table>
| 2. Cool | Allow the machine to cool 5 minutes before storing.  
**WARNING**: A hot engine can be a fire hazard. |
| 3. Wipe With Oily Rag | Wipe the beam and wedge with an oily rag to prevent corrosion. |
**CAUTION**: Gasoline will oxidize and deteriorate in storage. Old gasoline in the engine will cause hard starting and leave gum deposits that can clog the fuel systems. Deterioration problems may occur within a few months, or even less if gasoline was not fresh when you filled the tank. |
| **Short-Term Storage:** |  
1. Consider adding a fuel stabilizer to extend fuel storage life.  
2. Leave the fuel valve lever in the OFF position to reduce the possibility of fuel leakage. |
| **Long-Term Storage:** (between infrequent uses and at end of season) | Drain the fuel tank and carburetor as instructed in the engine owner's manual.  
**Important Safety Instructions**  
- Always drain fuel from tank in outdoor, well-ventilated area.  
- Stay away from sources of heat, flame, or sparks while handling fuel.  
- Clean up fuel spills/splashes immediately. |
| 5. Splitter Storage Location | Store the log splitter in a location away from corrosive material, sources of heat, open flames, sparks or pilot lights.  
**WARNING**: Never store log splitter inside where there is a source of heat or an open flame, spark or pilot light – such as water heaters, space heaters, furnaces, clothes dryers, or other gas appliances – EVEN IF the log splitter's gas tank is empty, residual gasoline vapors could ignite.  
**NOTE**: Do not store the log splitter near fertilizer or any other corrosive material. |
**WARNING**: Gasoline vapors can ignite if they collect inside an enclosure and explosion can result. |
Periodic Maintenance

In addition to the maintenance performed with each use, periodic maintenance should also be performed according to the following schedule.

**WARNING**

ALWAYS shut off the engine, disconnect the spark plug, and relieve system pressure before cleaning, adjusting, or repairing the splitter. Relieve system pressure by moving Split Control Lever back and forth several times.

**Important:**

If a part needs replacement, only use parts that meet the manufacturer's specifications. Replacement parts that do not meet specifications may result in a safety hazard or poor operation of the log splitter.

<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>2. Hydraulic Oil Change</td>
<td>Change hydraulic oil annually or every 100 hours.</td>
</tr>
</tbody>
</table>

**WARNING:** High fluid pressures and temperatures are developed in hydraulic log splitters. Hydraulic fluid escaping through a pin-hole sized opening can burn or puncture skin, resulting in wounds that could cause blood poisoning, infection, disability, gangrene, amputation, or death. Therefore, the following instructions should be heeded at all times when inspecting or servicing the hydraulic components of the log splitter.

- NEVER check for leaks with your hand. Leaks can be located by holding a piece of cardboard or wood (at least two feet long) with your hand at one end and passing the other end near the suspected area (wear eye protection). Look for discoloration of the cardboard or wood.
- NEVER adjust the pressure of the pump or valve.
- If injured by escaping fluid, no matter how small the wound is, see a doctor at once. A typical injection injury may be a small wound that does not look serious. However, severe infection or reaction can result if proper medical treatment is not administered immediately by a doctor who is familiar with injection injuries.

1. Fully retract wedge.
2. Disconnect the spark plug wire from the spark plug and turn fuel valve off.
3. Use 10wt AW32, ASLE H-150, or ISO32 oil. See the “Specifications” section of this manual for hydraulic oil capacity.
4. With engine off, relieve hydraulic system pressure by moving Split Control Lever back and forth several times.
5. Remove hydraulic oil fill cap.

**WARNING:** NEVER remove the hydraulic oil fill cap when the engine is running or hot. Hot oil can escape causing severe burns. Allow the log splitter to cool completely before removing hydraulic oil fill cap.

6. Remove the drain plug from the hydraulic tank to drain the hydraulic oil into a 10 gallon pan.
## Periodic Maintenance

| 2. Hydraulic Oil Change (continued) | 7. Reinstall drain plug  
8. Remove suction strainer and wipe off debris with a dry cloth.  
9. Apply thread sealant and reinstall suction strainer |
|-----------------------------------|-------------------------------------------------|
|  | 10. Dispose of used oil at an oil-recycling center. Used hydraulic oil is hazardous waste.  
11. Fill the hydraulic tank and replace the oil fill cap.  
12. Pull on the starter grip recoil at least 20 times so that hydraulic fluid has cycled through the pump.  
13. Reconnect the spark plug wire to the spark plug and turn fuel valve on.  
14. Start engine. Extend and retract wedge five (5) times to purge air from the system.  
15. Check hydraulic oil level with the engine off and wedge retracted. Fill as needed – check that oil level reads full. Note: Do not thread in dipstick when checking oil level. |

### 3. Oil Filter Change

| 3. Oil Filter Change | Change return line filter after the first 50 hours of operation, and every 250 hours thereafter.  
Replace return line filter (Refer to the parts breakdown section for part #).  
1. Shut down the engine on the Log Splitter.  
2. Relieve hydraulic system pressure by moving the splitter control lever back and forth several times.  
3. Unthread the canister and discard it along with the accompanying seal. Note: A strap wrench may be required. Not provided. |
|---------------------|-------------------------------------------------|
|  | 4. Apply a small amount of lubricant to the new canister seal.  
5. Install the new canister and hand tighten 3/4 turn after gasket makes contact with head. |

### 4. Spark Arrestor Muffler

| 4. Spark Arrestor Muffler | If the engine is equipped with a spark arrestor muffler, clean and inspect it regularly (follow engine manufacturer's service instructions). Replace if damaged. |
WARNING

Before troubleshooting or attempting to service, read the following safety instructions to avoid serious injury to the operator or bystanders from moving parts that can crush or cut, burns, fire or explosion, or escaping high pressure hydraulic fluid.

Important Safety Instructions:

1. Engine off. Always make sure the engine is off before cleaning, repairing or adjusting the splitter, except as recommended by the manufacturer.

2. Hydraulic safety. High fluid pressures and temperatures are developed in the hydraulic log splitters. Hydraulic fluid escaping through a pin-hole sized opening can burn or puncture skin, resulting in wounds that could cause blood poisoning, infection, disability, gangrene, amputation, or death. Therefore, the following instructions should be heeded at all times when inspecting or servicing the hydraulic components of the log splitter:
   - Stop the engine, disconnect the spark plug, and move all control valve handles back and forth to relieve pressure before changing or adjusting hydraulic components such as hoses, tubing, fittings, or other components.
   - Do not remove the hydraulic oil fill cap when the engine is running. Hot oil can escape causing severe burns. Allow the log splitter to cool completely before removing the hydraulic oil fill cap.
   - Do not adjust the pressure setting to the pump or valve.
   - Do not check for leaks with your hands. Leaks can be located by holding a piece of cardboard or wood (at least 2 feet long) with your hand at one end and passing the other end near the suspected area (wear eye protection). Look for discoloration of the cardboard or wood.
   - If injured by escaping fluid, no matter how small the wound is, see a doctor at once. A typical injection injury may be a small puncture that does not look serious. However, severe infection or reaction can result if proper medical treatment is not administered immediately by a doctor who is familiar with injection injuries.

</table>
WARNING

Carefully read and make sure you understand the following safety information before using the log splitter. Improper use or maintenance of the log splitter can result in serious injury to the operator or bystanders from moving parts that can crush or cut, flying objects, burns, fire or explosion, escaping high pressure hydraulic fluid, or carbon monoxide poisoning.

Introduction

- **Read Manual.** Read this operator's manual and the engine Owner's Manual completely before attempting to use the log splitter. Serious injury or death can result if safety instructions are not followed.
- **Instruct operators.** The log splitter owner should instruct all operators in safe log splitter operation.
- **Intended use.** Log splitters should only be used for splitting wood logs, lengthwise with the grain. Do not use for other purposes, as unforeseen hazards may result.

Prohibition Against Modifications

Never modify or alter the log splitter in any way. Modifications can create serious safety hazards and will void the warranty.

- **Attachments.** Never add attachments to the splitter, except for authorized accessories supplied by the manufacturer with instructions for safe installation and use.
- **Engine Speed.** The maximum engine speed is preset at a safe limit. Never attempt to modify the engine speed setting to run at a higher speed.
- **Fuel/Exhaust system.** NEVER modify or add to the exhaust system, fuel tanks, or fuel lines. Fire can result.
- **Remote Control.** NEVER attach a rope, cable, or other remote device to the splitting control.
- **Splitting Wedge.** NEVER attempt to change the height or speed of the splitting wedge.
- **Pressure Setting.** NEVER increase the pressure setting of the pump or control valve.

Operator Restrictions

- **Untrained Operators.** Do not allow anyone to operate the log splitter who has not read the owner's manual or been instructed on the safe use of the splitter.
- **Minimum Operator Age.** Never allow anyone under age 16 to operate the log splitter. Anyone 16 years of age and older must be trained and supervised by a trained adult.

Safety in Moving and Towing the Log Splitter

**WARNING**

The log splitter is very heavy. It can cause serious injury if it rolls out of control or tips over.

Follow the safety instructions below for safely moving the log splitter.

General Safety While Moving

- **Horizontal position.** Make sure the log splitter is secured in the horizontal position before moving the log splitter. DO NOT move the log splitter when it is in the vertical position because it will be unstable and could tip.
- **Hills.** Do not move the log splitter up or down hills by hand – use a towing vehicle.
- **Engine off.** Never move the log splitter with its engine running.
- **No riding.** Never allow anyone to sit or ride on the log splitter.
- **No cargo.** Never transport cargo or wood on the log splitter.

Safety During Towing

- **Read instructions.** Review towing safety instructions in your towing vehicle manual.
- **Securely attached.** Be sure the log splitter is securely attached to the towing vehicle before towing.
**Summary of Important Safety information for Operation**

- **Tires.** Be sure the tires are fully inflated and in good repair before towing the log splitter. When adding air to the tires, do not over-inflate – serious injury could occur if tire explodes.
- **Added length.** Be aware of the added length of the splitter.
- **Speed Limit.** Never tow this log splitter over 45 mph. Faster speeds may result in loss of control.
- **Rough terrain.** Be extra cautious and drive slowly when traveling over rough terrain.
- **Under the influence.** Never tow this splitter while under the influence of alcohol, drugs, or medication.
- **On public roads.** If towing on a public road, make sure to comply with all local, state, and federal towing requirements. It is the sole responsibility of the purchaser to obtain licensing, trailer lights, safety chains or signage, as needed to comply.
- **Unattended.** Turn off the towing vehicle before leaving the splitter unattended.
- **Disconnect before operating.** Do not use the log splitter while it is connected to the towing vehicle.

**Safety – Before Use**

**Read/Instruct**

- **Read manual.** Do not allow anyone to operate the log splitter who has not read the owner's manual or has not been instructed on the safe use of the splitter.
- **Review safety rules.** Before starting this log splitter, review the "Rules for Safe operation." Failure to follow these rules may result in serious injury to the operator or bystanders.
- **Know how to stop.** Be thoroughly familiar with all controls and proper use of the equipment. Know how to stop the splitter and relieve system pressures quickly if needed.

**Personal Protective Equipment**

- **Eye protection.** Always wear safety glasses or goggles when operating the machine. Pieces of log may fly out and serious eye injury can occur.
- **Boots.** Falling logs can crush feet. Always wear safety shoes or heavy boots when operating or helping to load logs.
- **Loose/dangling.** Loose or dangling apparel can become entangled in moving parts. Never wear jewelry or loose-fitting clothing.
- **Gloves.** Wear snug fitting gloves without drawstrings or loose cuffs.
- **Hearing Protection.** The use of earplugs or other hearing protection device is recommended.

**Safety During Inspection/Maintenance**

Always inspect your log splitter before each use, and repair as needed, to keep it in safe working condition:

- **Engine off.** Always make sure the engine is off before cleaning, repairing or adjusting the splitter, except as recommended by the manufacturer.
- **Engine debris.** Debris on a hot engine can be a fire hazard. With the engine off, clean debris and chaff from engine cylinder head, cylinder head fins, fan housing/recoil starter, and muffler areas. Avoid contact with hot muffler.
- **Other debris.** Debris on moving parts can cause excess wear. With the splitter engine off, clear debris from moving parts.
- **Fuel tank / lines.** Before each use, check fuel tank and fuel lines for leaks. Any fuel leak is a fire hazard. Fix any fuel leaks before starting engine.
- **Mechanical parts.** Check to be sure that all nuts and bolts are tight to make sure the log splitter is in safe working condition.
- **Hydraulic system.** Check the hydraulic system (hoses, tubing, clamps/fittings, pump, and cylinder) carefully before each use. Do not operate the log splitter with frayed, kinked, cracked or damaged hydraulic hoses, fittings, or tubing, or if oily residue is observed on any of the components. High fluid pressures and temperatures are developed in the log splitter. Hydraulic fluid escaping through a pin-hole sized opening can burn or puncture skin, resulting in wounds that could cause blood poisoning, infection, disability, gangrene, amputation, or death. Therefore, the following instructions should be heeded at all times when inspecting or servicing the hydraulic components of the log splitter:
  - Do not remove the hydraulic oil cap when the engine is running. Hot oil can escape causing severe burns. Allow log splitter to cool completely before removing hydraulic oil cap.
  - Do not adjust the pressure setting of the pump or valve.
Do not check for leaks with your hand. Leaks can be located by holding a piece of cardboard or wood (at least two feet long) with your hand at one end and passing the other end near the suspected area (wear eye protection). Look for discoloration of the cardboard or wood.

Stop the engine, disconnect the spark plug, and move all control valve handles back and forth to relieve pressure before changing or adjusting hydraulic system components such as hoses, tubing, fittings or other components.

If injured by escaping fluid, no matter how small the wound is, see a doctor at once. A typical injection injury may be a small puncture wound that does not look serious. However, severe infection or reaction can result if proper medical treatment is not administered immediately by a doctor who is familiar with injection injuries.

Spark arrestor muffler. If the engine is equipped with a spark arrestor muffler, clean and inspect it regularly (follow manufacturer's service instructions). Replace if damaged.

Tires. Be sure tires are fully inflated and in good repair before towing the splitter. When adding air to tires, do not over-inflate -- serious injury could occur if tire explodes.

Guards / shields. Make sure all guards and shields are replaced after servicing the log splitter.

Replacement parts. If a part needs replacement, only use parts that meet the manufacturer's specifications. Replacement parts that do not meet specifications may result in a safety hazard or poor operation of the log splitter.

Safety During Fueling

Gasoline is highly flammable and explosive. You can be burned or seriously injured when handling fuel. Use extreme care when handling gasoline:

Fuel outdoors. Fill fuel tank outdoors – never indoors. Gasoline vapors can ignite if they collect inside an enclosure. Explosion can result.

Use approved container. Never pump fuel directly into engine at gas station. Static charge can build and ignite fuel. Use an UL approved fuel container to transfer gas to the engine.

Running / hot engine. A running engine is hot enough to ignite fuel. Never add fuel or remove gas cap if engine is running or still hot. Stop the engine and allow to cool at least two minutes before adding fuel.

Heat / flames / sparks. Stay away from sources of heat, flame, or sparks while adding fuel.

Don't overfill. DO NOT overfill the gas tank. Allow at least 1/2” of empty space below the fill neck to allow for fuel expansion.

Replace cap. Replace gas cap securely before starting engine.

Spills. Clean up fuel spills immediately. Move log splitter away from spilled fuel on the ground. Wipe fuel off engine and wait 5 minutes for excess fuel to evaporate before starting engine. Gas soaked rags should be disposed of properly.

On skin / clothes. If gasoline is spilled on your skin or clothes, change clothes and wash skin immediately.

Gasoline storage. Store gasoline in a cool, dry place in an UL approved, tightly sealed container.

Safety in Work Site Selection

Spark arrestor. If your splitter will be used near any unimproved forest, brush, or grassy covered land, then engine should be equipped with a spark arrestor. See the "Specifications" section of this manual to determine if your splitter already has a spark arrestor. Make sure you comply with applicable local, state and federal codes.

Hot exhaust. Hot exhaust fumes from engine can cause fire. Position muffler at least 7’ from combustible objects during operation.

Fire extinguisher. Keep a class ABC fire extinguisher available as a precautionary measure when operating the log splitter in dry areas.

Level, dry surface. To prevent accidental falls and equipment tip over, make sure the splitter is situated on a dry, level surface with good footing. Stay clear of areas with mud, ice, tall grass, weeds, brush, or snow.

Block wheels. Always block the wheels to prevent unintended movement of the log splitter.

Carbon monoxide. The running engine gives off carbon monoxide, a poisonous gas that can kill you. You CANNOT smell it, see it, or taste it. ONLY run log splitter OUTDOORS and away from air intakes. NEVER run log splitter inside homes, garages, sheds, or other semi-enclosed spaces. These spaces can trap poisonous gases, EVEN if you run a fan or open windows. If you start to feel sick, dizzy, or weak while using the log splitter, shut off the engine and get to fresh air RIGHT AWAY. See a doctor. You may have carbon monoxide poisoning.
WARNING: Before starting this log splitter, review the following rules for safe operation. Failure to follow these rules may result in serious injury to the operator or bystanders.

- **Safety equipment / controls.** Always operate the log splitter with all safety equipment in place and in good working order, and all controls properly adjusted for safe operation.
- **Operating speed.** Always operate the log splitter at the manufacturer's recommended speed. The maximum speed of the engine, pump and wedge are preset within safe limits.
- **Know how to stop.** Be thoroughly familiar with all controls and with the proper use of the equipment. Know how to stop the log splitter and relieve system pressures quickly if needed.
- **Daylight only.** Only use the log splitter in daylight so you can see what you are doing.
- **Smoking / sparks.** Never smoke while operating the log splitter, and never operate near sources of sparks or flames.
- **Hot muffler.** If you are starting a warm engine, stay clear of muffler. It may still be hot enough to burn you.
- **Unattended.** Never leave the machine unattended while the engine is running.
- **Under the influence.** Never operate, or let anyone else operate, the log splitter while under the influence of alcohol, drugs, or medication.
- **Adjusting / repairing.** Always make sure the engine is off before cleaning, repairing or adjusting the splitter, except as recommended by the manufacturer. In addition, disconnect the spark plug and move all control handles back and forth to relieve system pressure before changing or adjusting hydraulic system components such as hoses, tubing, fittings or other components.
- **Carbon monoxide.** The running engine gives off carbon monoxide, a poisonous gas that can kill you. You CANNOT smell it, see it, or taste it. If you start to feel sick, dizzy, or weak while using the log splitter, shut off the engine and get to fresh air RIGHT AWAY. See a doctor. You may have carbon monoxide poisoning.
- **Other exhaust dangers.** Engine exhaust, some of its constituents, and certain vehicle components contain or emit chemicals known to the State of California to cause cancer, birth defects, or other reproductive harm. Avoid inhalation of exhaust.

**Safety in Loading, Operating, and Unloading**

- **Square log ends.** Logs that are not cut square can slide out while splitting and become a safety hazard or cause excessive force to log splitter components. Use a chainsaw to cut logs square on each end before attempting to split them.
- **Single log.** Never attempt to split more than one log at a time. Pieces of log can unexpectedly be thrown from the machine causing serious injury.
- **Split along grain.** Do not use the log splitter to split logs across the grain. Doing so will damage the log splitter and could also cause pieces of log to be thrown, injuring the operator or bystanders.
- **Forked logs.** Splitting forked logs can cause damage the log splitter. Trim the forked log with a chain saw prior to splitting the log.
- **Keep hands clear.** ALWAYS keep hands and feet away from the endplate, wedge, and partially split logs while loading, operating and unloading the log splitter.
- **Operator position.** ALWAYS operate the log splitter from the manufacturer's indicated OPERATOR POSITION. Other positions are unsafe because they can increase the risk of injury from crushing, cutting, flying objects, or burns.
- **Straddling / reaching across.** Never straddle, reach across, or step over the beam while the engine is running and the log splitter is in the horizontal position. You could trip, actuate the controls, and get seriously injured.
- **Second person.** Many accidents occur when there is more than one person involved in loading and operating the log splitter. Only one person should operate the controls. If a second person is assisting in loading logs, the operator must NEVER actuate the Split Control Lever until the assistant and all bystanders are at least 10 feet away. NEVER allow an assistant to hold the log in place while the operator actuates the Split Control Lever.
Summary of Important Safety information for Operation

Loading/Unloading

- **Unsplit log pile.** Do not pile logs to be split in a place that will make you reach across the log splitter in order to load them.
- **Hold bark side.** Hold the bark side of logs when loading or positioning, never the ends. Never place your hands or any part of your body between a log and any part of the log splitter.
- **NOTE for vertical position loading:** Place the log on the endplate and turn it until it leans against the beam and is stable. If the log is too big or oddly shaped, stabilize the log with wooden shims between the log and endplate or ground. DO NOT use your leg or knee to stabilize the log. NEVER stabilize the log by placing your hand on top of the log.
- **Wedge moving.** NEVER load or unload logs while the wedge is moving.
- **Cracks.** Cracks in logs can close quickly and pinch fingers. Keep fingers away from any cracks that open in partially split logs.
- **Split log pile.** Move each log away from log splitter after it is split. Split logs left near the log splitter are a trip hazard.
- **Remove hands.** Remove both hands from log before activating Split Control Lever.
- **Hand activate.** Use only your hand to operate the Split Control Lever. Never use any other body part, or a rope, cable, or other remote device to actuate the control.
- **Returning wedge.** Once the control valve is actuated in the return direction, the wedge is designed to keep returning by itself completely and then stop automatically. Stay clear while the wedge is returning. It is still powerful enough on the return stroke to cause serious injury.
- **Log stuck on wedge.** If a log does not split completely and becomes stuck on the wedge, follow the instructions below to remove the log. A log can become stuck to the wedge if the wedge becomes embedded in the log and the log doesn't split and separate. This can happen if the log is too stringy or tough to split completely. A stuck log will move back with the wedge on the initial attempt to retract the wedge. If this happens, retract the wedge completely to allow the log dislodger to strip the log from the wedge. Keep hands clear of log, wedge, and log dislodger while wedge is retracting.

⚠️ **WARNING:** NEVER attempt to remove a stuck log by:
- Modifying the splitter.
- Adding attachments to the splitter.

Personal injury could result from log or metal pieces flying out at high speed toward the operator or bystanders, or the splitter could become damaged.

- **Changing splitting position.** Do not change splitting positions (horizontal/vertical) with the engine running. You may contact the muffler and receive serious burns. Be careful to avoid contact with hot muffler even after the engine is turned off.
- **Refueling.** Never refuel the engine until it has cooled at least two minutes.

Safety – After use

- **Return to horizontal.** If in the vertical position, turn off engine and return log splitter to the horizontal position for greater stability and to prepare for transportation. Avoid contact with hot muffler.
- **Remove engine debris.** Debris on a hot engine can be a fire hazard. With the engine off, clean debris and chaff from engine cylinder head, cylinder head fins, fan housing/recoil starter, and muffler areas. Avoid contact with hot muffler.
- **Let engine cool before storing.** Let engine cool for at least five minutes before storing. A hot engine can be a fire hazard.
- **Storage location.** Store the log splitter in a location away from sources of heat, open flames, sparks or pilot lights – such as water heaters, space heaters, furnaces, clothes dryers, or other gas appliances. Even if the log splitter's gas tank is empty, residual gasoline vapors could ignite.
- **Gasoline storage.** Store extra gasoline in a cool, dry place in an UL approved, tightly sealed container. Gasoline vapors can ignite if they collect inside an enclosure.
- **Periodic maintenance.** Perform periodic maintenance as directed in this manual to keep the log splitter in safe working condition.
Assembly Instructions

Dismantle shipping crate and remove parts from any boxes. Remove nuts and lag bolts holding the beam assembly, engine assembly, and axle assembly in place in the crate. Fasteners used for packaging can be discarded. Cut all zip ties and remove packaging materials from all components. Using this manual, identify and sort components as necessary.

Closely inspect all log splitter components.
If you have missing or damaged components, please contact Product Support at 1-800-350-8739.

Find a work space that is large enough to maneuver log splitter once completely assembled. Assemble log splitter on solid and level ground.

⚠️ CAUTION

**Heavy lifting required.** Some of the components in these assembly instructions are heavy and cannot be lifted by one person safely. Plan on assembling this product when another person can be available to help.

Tools needed: Two adjustable wrenches, phillips screwdriver, 8mm socket, 10mm wrench, 13mm wrench, 18mm wrench, pliers, side cutter, hammer, ratchet, torque wrench, 13mm socket, 18mm socket, 38mm socket, 22mm crowfoot wrench, 32mm crowfoot wrench, and large oil filter wrench.
Assembly Instructions

Parts Bag Contents

Part # 82280

Qty: 1

Part # 778827
Return Filter Fitting
Qty: 1

Part # 780599
White Plastic Dust Cap Tool
Qty: 1
Step 1 – Wheels to Axle Assembly

- Remove everything from the axle (protective wrap, nut, washer, and cotter key).
- Slide wheel onto axle with valve stem facing out.
- Slide wheel washer up against the wheel bearing.
- Torque the axle nut to 30-40 ft.-lb.
- Rotate tire to ensure proper bearing seating.
- Loosen the axle nut until loose enough to turn the axle nut with your fingers.
- Re-tighten the axle nut until finger tight.
- Insert the cotter pin through the hole in axle nut and axle. Bend and spread prongs in opposite directions so the axle nut will not come off (make sure the wheel spins freely).
- Use dust cap tool and hammer to install the dust cap on the wheel hub, placing a small square of scrap lumber over the dust cap tool and tapping with the hammer. Tap until the dust cap is well seated against the hub.
- Repeat step for the other side.

Components Needed from Parts Bag:

- Part # 780598 Dust Cap Qty: 2
- Part # 780599 White Plastic Dust Cap Tool Qty: 1
- Wheel Bearing
- Wheel Washer
- Cotter Pin
- Axle Nut
- Dust Cap

Tools Needed:

- Torque Wrench
- Pliers
- Hammer
- Dust Cap Tool
- 38mm Socket
- Ratchet
**Assembly Instructions**

**Step 2 – Tow bar Assembly to Axle Assembly**

- Remove bolts and nuts from the beam mount on top of the axle assembly.
- Slide tow bar assembly into the beam mount on top of the axle assembly.
- Lock the support leg in the down position on a flat surface so the tow bar is level.
- Align the holes and install (2) bolts and (2) nuts.
- Torque to 71 ft.-lb.

**Tools Needed**

- Ratchet
- Torque Wrench
- 18mm Socket
- 18mm Wrench
Assembly Instructions

**Step 3 – Install Filter**

- **CAUTION:** Never back off an installed pipe fitting to achieve proper alignment. Loosening installed pipe fittings will corrupt the seal and contribute to leakage and failure.

- Screw finger-tight (1) Return Line Filter Head onto hydraulic tank return port. *NOTE: The arrow on filter head should point towards the tank. Also, thread sealant is already in place on hydraulic tank return port.*

- Wrench-tighten the filter head to 1.5-3.0 Turns Past Finger Tight position. Consider final orientation position as to not exceed the recommended Turns Past Finger Tight. Properly assembled fittings total thread engagement should be 3.5-6 turns.

- Lightly coat Return Line Filter Canister seal with oil.

- Screw finger-tight (1) Return Line Filter Canister onto bottom of return line filter head until gasket makes contact and continue until hand tight. Then, tighten filter an additional 1/2 turn with oil filter wrench.

- Screw finger-tight (1) Filter Fitting into the return line filter head.

- Wrench-tighten the fitting to 1.5-3.0 Turns Past Finger Tight position. Hold filter head with another wrench to keep it from turning past its desired position. Consider final orientation position as to not exceed the recommended Turns Past Finger Tight. Properly assembled fittings total thread engagement should be 3.5-6 turns, and fitting orientation should be as shown below (45° angle toward tow bar).

**Tools Needed**

- (2) Adjustable Wrenches
- Oil Filter Wrench

**NOTE:** Do not over-tighten filter. This will cause difficulties in removing filter for periodic maintenance.

**Fittings Needed from Parts Bag:**

- Part # 778827
- Return Filter Fitting
- Qty: 1

![Diagram of return filter fitting](image-url)

**Hydraulic Tank Return Port**
Assembly Instructions

Step 4 – Engine Assembly to Axle Assembly

- Place engine assembly on engine mount and align the holes as shown in the engine mounting patterns.
- Install using (4) bolts and (4) nuts.
- Torque to 21 ft.-lb.

Tools Needed

- Ratchet
- Torque Wrench
- 13mm Socket
- 13mm Wrench

Fasteners Needed from Parts Bag:

| Part # 82280 | M8-1.25 x 40mm | Qty: 4 |
| Part # 82281 | M8-1.25 Nut     | Qty: 4 |

VH1724GC & VH1730GC
Engine Mounting Pattern

VH1737GX
Engine Mounting Pattern

Engine Mount
Assembly Instructions

Step 5 – Attach suction hose

- Remove the suction hose from the beam assembly (zip tied to side).
- Slide one end of the hose onto the elbow fitting on the axle assembly.
- Slide the suction hose onto the bottom of the pump.
- Loosen hose clamps and reposition to approximately 3/8” from ends of hose. Torque hose clamps to 77 in.-lbs.
- *Note: It may be necessary to loosen hose clamp on tank end of hose and reposition hose on tank end to achieve a length which allows installation to pump. Tighten hose clamp again after repositioning.*

Tools Needed

- 8mm socket
- Ratchet
- Torque wrench
Assembly Instructions

Step 6 – Stand beam upright

- CAUTION: Beam assembly is top heavy.
- Carefully stand beam assembly in vertical position on solid, level ground. **Assistance from a second person is required.**

<table>
<thead>
<tr>
<th>Tools Needed</th>
</tr>
</thead>
<tbody>
<tr>
<td>None</td>
</tr>
</tbody>
</table>

⚠️ **WARNING**

Make sure beam assembly is standing on flat, level area. Have another person steady the beam to prevent it from tipping over. The beam assembly weighs approximately 350 pounds and will cause bodily injury if it falls on someone.
**Assembly Instructions**

### Step 7 – Beam Assembly to Axle Assembly

- Remove pivot pin from the top of the axle assembly after removing the cotter pin.
- Carefully align the axle assembly with the beam assembly. Have a person hold the beam in place while maneuvering any assembly.
- Center the beam mount on the axle assembly with the beam mount on the beam assembly.
- Insert pivot pin through hole of beam mount. If desired, a hammer can be used to gently tap the pin into place.
- Install cotter pin.

### Tools Needed

- Hammer

---

**Diagram:**

- Pivot Pin
- Cotter Pin
- Beam Mount
Assembly Instructions

Step 8 – Beam rest to beam

- Loop the lanyard of the catch pin around the beam rest ear.
- Align beam rest with beam rest mounting bracket with the horizontal lock decal facing the valve side of the splitter. Attach to the beam using (2) bolts and (2) nuts.
- Torque nuts to 21 ft.-lb.
- Remove the catch pin from the hole in the beam rest and leave it dangling freely on the lanyard.

Fasteners Needed from Parts Bag:

- Part # 82561
  M8-1.25 x 25mm
  Qty: 2

- Part # 82281
  M8-1.25 Nut
  Qty: 2

Tools Needed:

- Ratchet
- Torque Wrench
- 13mm Socket
- 13mm Wrench
Assembly Instructions

Step 9 – Block and Rotate

- Block the wheels and rotate the beam assembly to the horizontal position.
- Insert the catch pin through the beam rest to lock the beam in the horizontal position.

Tools Needed

- None
Step 10 – Handle to Beam

- Align handle weldment with holes in the front plate of the beam.
- Install (3) bolts and (3) nuts.
- Torque to 21 ft.-lb.

Fasteners Needed from Parts Bag:

- Part # 82561
  M8-1.25 x 25mm
  Qty: 3

- Part # 82281
  M8-1.25 Nut
  Qty: 3

Tools Needed

- Ratchet
- Torque Wrench
- 13mm Socket
- 13mm Wrench
Assembly Instructions

Step 11 – Install Valve

- Remove all plastic plugs from the valve.
- Looking at straight fitting from end with nut/washer/O-ring assembly, turn upper nut clockwise until it meets the lower nut.
- Use valve port marked “A” to thread the valve onto the straight fitting until the valve touches the o-ring.
- Back the valve off until valve is in the proper orientation.
- Hold the valve in the orientation shown below and torque nut against the valve at 37-46 ft.-lb.
- Attach the valve plate to the valve using (3) bolts and (3) nuts.

Tools Needed

- Phillips Screwdriver
- Torque Wrench
- 10mm Wrench
- Adjustable Wrench or 7/8” Wrench
- 22mm Crowfoot Wrench

Fasteners Needed from Parts Bag:

- Part # 82562
  M6-1.00 x 35mm
  Qty: 3
- Part # 82563
  M6-1.00 Nut
  Qty: 3

Straight Fitting
Assembly Instructions

Step 12 – Install Handle on Valve

- Slide the valve handle into the clevis slots on the valve.
- Align the holes in the handle with the clevis holes.
- Insert the supplied pins through the holes and secure with the supplied bridge clips.

Tools Needed

- Pliers
Assembly Instructions

Step 13 – Install Valve Outlet Fitting

- Lubricate O-ring and threads on fitting with clean oil
- Looking at fitting from end with nut/washer/O-ring assembly, turn nut clockwise as far as possible
- Using wrench, turn (1) valve outlet fitting into the valve port marked “Out” until washer touches control valve. Continue turning until washer touches thread nearest wrench pad
- Back off fitting counterclockwise not exceeding one revolution until it is oriented as shown, facing the hitch end of the splitter.
- Place wrench on the wrench pad of fitting to prevent fitting from turning and torque nut to 70-87 ft.-lb.

Tools Needed

- (2) Adjustable Wrenches
- Torque Wrench
- 32mm Crowfoot Wrench

Fitting Needed from Parts Bag:

Part # 778642
Valve Outlet Fitting
Qty: 1

Nut/Washer/O-ring Assembly
Wrench Pad
Assembly Instructions

Step 14 – Install Cylinder Hose Fitting

- Lubricate O-ring and threads on fitting with clean oil.
- Looking at fitting from end with nut/washer/O-ring assembly, turn nut clockwise as far as possible.
- Using wrench, turn (1) cylinder hose fitting into valve port marked “B” until washer touches control valve. Continue turning until washer touches thread nearest wrench pad.
- Back off fitting counterclockwise not exceeding one revolution until it is oriented in the correct position, at a 90° angle.
- Place wrench on the wrench pad of fitting to prevent fitting from turning and torque nut to 37-46 ft.-lb.

Fitting Needed from Parts Bag:

Part # 778827
Cylinder Hose Fitting
Qty: 1

Part # 778827
Wrench Pad
Nut/Washer/O-ring Assembly

Tools Needed

- (2) Adjustable Wrenches
- Torque Wrench
- 22mm Crowfoot Wrench
Step 15 – Install Valve Inlet Fitting

- Lubricate O-ring and threads on fitting with clean oil
- Looking at fitting from end with nut/washer/O-ring assembly, turn nut clockwise as far as possible
- Using wrench, turn (1) valve inlet fitting into valve port marked “IN” until washer touches control valve. Continue turning until washer touches thread nearest wrench pad
- Back off fitting counterclockwise not exceeding one revolution until it is oriented in the correct position, pointed directly down.
- Place wrench on the wrench pad of fitting to prevent fitting from turning and torque nut to 70-87 ft.-lb.

Tools Needed

- (2) Adjustable Wrenches
- Torque Wrench
- 32mm Crowfoot Wrench

Fitting Needed from Parts Bag:

Part # 791219
Valve Inlet Fitting
Qty: 1

Wrench Pad
Nut/Washer/O-ring Assembly
Assembly Instructions

Step 16 – Install Cylinder Hose

- Route the cylinder hose to the cylinder hose fitting on the valve.
- Screw finger-tight cylinder hose to the cylinder hose fitting.
- Wrench-tighten the fitting.

Tools Needed
- (2) Adjustable Wrenches

NOTE: This connection is self-sealing and does not require any type of sealing material.
Assembly Instructions

Step 17 – High Pressure Hose

- Remove hose with fittings and sleeving from hose guides.
- Remove plastic plug from pump outlet with pliers (plastic plug is the outer most fitting).
- Screw hand-tight high pressure hose to the pump outlet.
- Wrench-tighten the fitting to 1.5-3.0 Turns Past Finger Tight position. Properly assembled fittings total thread engagement should be 3.5-6 turns.
- Route hose back through hose guides, with hose as far down on the beam as possible (high pressure hose will be routed on the bottom).
- Screw finger-tight remaining end of the High-Pressure Supply Hose to the Valve Inlet Fitting on the control valve inlet.
- Wrench-tighten the fitting.

Tools Needed

- (2) Adjustable Wrenches
- Pliers
Step 18 – Install Log Cradles

- Insert (2) bolts in lower holes in the beam and install (2) nuts on bolts leaving them loose enough to install the cradles.
- Slide log cradles onto bolts as shown below (with flanges pointed toward the hitch end of the splitter).
- Install upper (2) bolts and (2) nuts and tighten.
- Torque to 21 ft.-lb.

Fasteners Needed from Parts Bag:

- Part # 82561 M8-1.25 x 25mm Qty: 4
- Part # 82281 M8-1.25 Nut Qty: 4

Tools Needed

- Ratchet
- Torque Wrench
- 13mm Socket
- 13mm Wrench

Note orientation of log cradle mounts
Assembly Instructions

Step 19 – Low Pressure Return Hose

- Route the low pressure return hose from return filter fitting to valve outlet fitting leaving it run through the hose guides on beam.
- Loosen and then position and tighten hose clamps approximately 3/8” from ends of hose. Torque hose clamps to 77 in.-lbs.
- Put splitter into vertical position and check the hoses for kinking, loosen and twist if necessary, and return to horizontal position.
- Once the hoses are placed correctly and do not kink or catch going to and from the vertical position, wrap zip ties around both hoses and hose guides as shown below and tighten. Cut off tail end of zip ties with side cutter.

Tools Needed

- 8mm Socket
- Ratchet
- Torque Wrench
- Side Cutter
Available Accessories

Fender Kit (Item# 795171)
Fits all VH17 models

Engine Guard (Item# 795172)
Fits all VH17 models

Any Questions, Comments, Problems or Parts Orders
Call Brave Product Support 1-800-350-8739
Dear Valued Customer:

The Brave product you just purchased is built with the finest material and craftsmanship. Use this product properly and enjoy the benefits from its high performance. By purchasing a Brave product, you show a desire for quality and durability. Like all mechanical equipment this unit requires a due amount of care. Treat this unit like the high quality piece of machinery it is. Neglect and improper handling may impair its performance.

Thoroughly read the instructions and understand the operation before using your product. Always contact Brave Product Support at 1-800-350-8739 prior to having any service or warranty work performed, as some services performed by parties other than Brave approved service centers may void this warranty. This limited warranty is in lieu of any other warranty expressed or implied, written or oral and Brave assumes no other responsibility or liability outside that expressed within this limited warranty.

Limited Warranty for Brave Log Splitter Models:

VH1724GC
VH1730GC
VH1737GX

“Consumer use” means personal residential household use by a consumer. “Commercial use” means all other uses, including, but not limited to, use for commercial, income producing or rental purposes or when purchased by a business.

This limited warranty applies to the original purchaser of the equipment (verification of purchase, in the form of a receipt, is the responsibility of the buyer), is non-transferable, and covers parts and labor. Parts will be replaced or repaired at no charge, except when the equipment has failed due to lack of proper maintenance. If a part is no longer available, the part may be replaced with a similar part of equal function. Any misuse, abuse, alteration or improper installation or operations will void warranty. Determining whether a part is to be replaced or repaired is the sole decision of Brave. Brave will not provide for replacement of complete products due to defective parts. Any costs incurred due to replacement or repair of items outside of a Brave approved facility is the responsibility of the buyer and not covered under warranty. Transportation costs to and from service center and/or service calls are the responsibility of the customer.

This limited warranty specifically excludes the following: failure of parts due to damage caused by accident, fire, flood, windstorm, acts of God, applications not approved by Brave in writing, corrosion caused by chemicals, use of replacement parts which do not conform to manufacturer’s specifications, damage related to rodent and/or insect infestation and damage caused by vandalism. Additional exclusions: loss of running time, inconvenience, loss of income, or loss of use, including any implied warranty of merchantability of fitness for a specific use. Also, outdoor power equipment needs periodic parts and service to perform well, and this limited warranty does not cover instances when normal use has exhausted the life of a component or the engine.

This limited warranty does not cover any personal injury or damage to surrounding property caused by failure of any part, misuse or inability to use the product. Alteration of the product, including safety features, shall void this limited warranty.

Repair or replacement of parts does not extend the warranty period. This limited warranty gives you specific legal rights. You may also have other rights that vary by state.

Please have model number, item number and serial number on hand prior to making a warranty claim or inquiry.
